Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3, "the device" lacks antecedent basis and is indefinite.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 5, 9, 11-13, 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilson (4,387,472).

Wilson teaches an apparatus comprising:

(a) at least one sensor 50, 52 for sensing at least one of pressure, force, temperature, and moisture, wherein the at least one sensor can be configured with value limits, and

(b) an alarm 62 when a value sensed by the at least one sensor is beyond a value limit.

Regarding claims 9 and 11, a liner and socket is inherent. The device of Wilson is configured sense the pressure between the limb and the socket which is the same pressure sensed between the leg and foot.

Claims 5, 7-9, 11-13, 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Sabolich et al (6,500,210).

Referring to at least figures 1-2, Sabolich et al teaches an apparatus comprising:

(a) at least one sensor 120, 122 for sensing at least one of pressure, force, temperature, and moisture, wherein the at least one sensor can be configured with value limits, and

(b) an alarm 128, 130, 132, 134 when a value sensed by the at least one sensor is beyond a value limit.

Regarding the computer, see 304.

Regarding "value limits", see at least elements 424 and 426.

Claims 5, 7-12, 14-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Helmy (5,888,230).

Referring to at least figures 5-6, Helmy teaches an apparatus comprising:

(a) at least one sensor 36, 38 for sensing at least one of pressure, force, temperature, and moisture, wherein the at least one sensor can be configured with value limits, and

(b) an alarm (pump 30) when a value sensed by the at least one sensor is beyond a value limit.

Regarding the computer, see 32.

Regarding at least claim 16, sensing pressure is "sensing force".

Allowable Subject Matter

Claims 1-4 allowed.

Claims 6, 14, 18-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
